

Exp:Implement a program on Multithreading.

1.

```
public class multi1 extends Thread {  
    public void run() {  
        System.out.println("Thread is Running.....");  
    }  
    public static void main(String arhs[]) {  
        multi1 t1=new multi1();  
        t1.start();  
    }  
}
```

OUTPUT:-

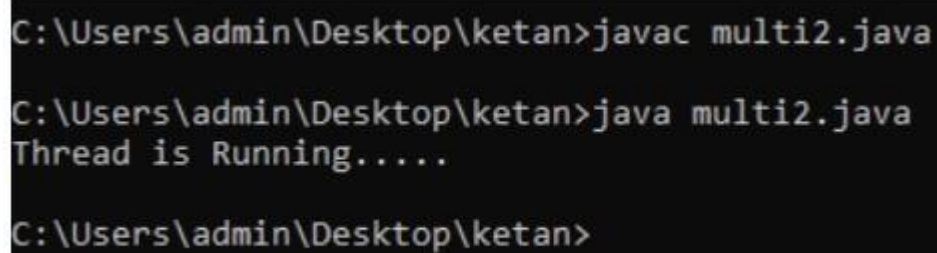

```
C:\Users\admin\Desktop\ketan>javac multi1.java  
C:\Users\admin\Desktop\ketan>java multi1.java  
Thread is Running.....  
C:\Users\admin\Desktop\ketan>
```

2.

```
public class multi2 implements Runnable {  
    public void run() {  
        System.out.println("Thread is Running.....");  
    }  
    public static void main(String args []) {  
        multi2 r1=new multi2();  
        Thread t1=new Thread(r1);  
        t1.start();  
    }  
}
```

OUTPUT:

```
C:\Users\admin\Desktop\ketan>javac multi2.java  
  
C:\Users\admin\Desktop\ketan>java multi2.java  
Thread is Running.....  
  
C:\Users\admin\Desktop\ketan>
```
